

# Collaborating with forks, branches, and pull requests

<https://github.com/leaderusername/repository>

<https://github.com/yourusername/repository>

## Local repository (cloned to your computer)

```
# Ensure your repository's main branch is up-to-date with upstream/main
git checkout main
git pull upstream main # make sure your computer repo is up to date
git push origin main   # make sure your origin (github.com repo) is up to date

# Create and checkout new branch, which you will give a very good name
git branch new-branch-with-good-name
git checkout new-branch-with-good-name

# Add, commit, push, rinse, repeat, within new-branch-with-good-name ONLY.

# When ready to show me code for merging into GRAND TRUTH, file a pull request
(PR) on github.com as:
upstream/main ← origin/new-branch-with-good-name
# While the PR is open, all subsequent commits/pushes in this branch will
automatically be included within the very same PR

# After the leader accepts and merges your PR into upstream/main, sync YOUR main
branch with upstream/main
git checkout main
git pull upstream main
git push upstream main
```
